Sheila,

Thanks for the call today - I've talked to Dave, and he's looking for the end result by August 28. Here's the draft statement of work. Please let us know what Kurt says, if this timeframe will work for him.
Thanks,

Lisa

Subject: Hanford mixed waste trenches (Trench 31 and 34) Groundwater Monitoring

Lisa:

Please find attached an updated scope of work for the groundwater monitoring support I'm looking for. As we discussed earlier this morning, this is taken from the original statement of work we used in soliciting bids from our local REPA contractors. I've attempted to be both narrower and more specific in the scope of work, with hopes of being more successful in either getting a non-R10 contractor bid that we can accept, or getting internal support.

As I mentioned, I've had several conversations with Sheila Fleming, all of which have resulted in a response that all regional hydros are already tied up with higher-priority work. If it were up to me, the fastest and most cost-effective route would be to make use of regional hydrogeology support. So, I'm hoping that you'll be willing to engage with Sheila one more time.

Thanks!

Dave
